EDUCATION

K.J.Somaiya Institute of Technology, Sion

2023 - 2027

- B.Tech in Information Technology
-

SKILLS

- **Programming Languages:** Python, SQL
 - **Frameworks:** Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn
 - **Data Science & Machine Learning:** Data Preprocessing, EDA, feature engineering, Machine Learning, model evaluation, Model Deployment, Statistical Analysis
 - **Deep Learning & AI:** ANN, CNN, RNN, LSTM, GRU, Transformers, TensorFlow, Keras
 - **Frameworks & Libraries:** Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, TensorFlow
 - **Databases:** MySQL, PostgreSQL
 - **Tools & Platforms:** Docker, Git, GitHub, Streamlit, Power BI, Advanced Excel, VS Code
-

PROJECTS

Jan 2026

AQI Prediction App ([Streamlit](#)) (Python, Pandas, Numpy, EDA, Scikit-learn, Streamlit)

- Built an AQI Category Prediction ML model using Python, Scikit-learn, and Streamlit, comparing Logistic Regression, Decision Tree, and KNN classifiers achieving up to 74.4% accuracy
- Developed a full ML pipeline including EDA, feature engineering, StandardScaler preprocessing, and model evaluation using accuracy score, confusion matrix, and classification report on 1,461 records
- Deployed an interactive web app using Streamlit with real-time predictions and health advisory outputs, packaged with serialized model artifacts using Joblib for production-ready inference

Jan 2026

Job Market Analysis Dashboard ([Github](#)) (SQL, Pandas, PowerBI)

- Built an end-to-end job market analysis pipeline using Python (Pandas) and SQL to clean, standardize, and extract in-demand skills from thousands of real-world job postings
- Developed an NLP-based skill extraction system to parse job descriptions, identifying top skills (Python, SQL, Power BI) and transforming unstructured text into structured datasets for analysis
- Designed an interactive Power BI dashboard visualizing skill demand by role, salary trends, and skill distribution, surfacing key insights.

May 2026

Movie Recommendation System (Python, FastAPI, Streamlit, Pandas, NumPy, Scikit-Learn, NLP, Web-Scraping, REST API)

- Developed a content-based movie recommendation system using TF-IDF vectorization and cosine similarity to generate personalized movie recommendations based on content similarity.
 - Built and deployed RESTful APIs using FastAPI and integrated the TMDB API to fetch movie metadata, posters, ratings, and detailed information in real time.
 - Collected and processed movie data through web scraping, performing data cleaning, preprocessing, and feature engineering using Pandas and NumPy.
 - Designed an interactive Streamlit web application enabling movie search, recommendation generation, and visualization of recommendation results through a user-friendly interface.
-

ADDITIONAL INFORMATION

- **Languages:** English, Hindi, Gujarati
- **Certifications:** Python Programming, Knowbuild Hackathon Top 20, Responsive Web development
